

Duration: 1 day

Description

The primary goal of this course is to allow participants to familiarize themselves with the principles of Lean software development and inherent Agile practices. Participants will be invited to be on the lookout for waste in their organization using the tools and techniques that will be demonstrated to them.

Objectives

- ✘ Understand the history of the Lean movement
- ✘ Learn the principles of Lean software development and the Agile practices associated with it
- ✘ Apply the Lean techniques to discover the major sources of waste in your organization

Target audience

- ✘ Managers
- ✘ Project leaders
- ✘ Development teams

Content

- ✘ History and definitions
- ✘ What is waste in terms of software development?
- ✘ Tools and techniques for discovering waste
- ✘ When does information become knowledge?
- ✘ Quality above all
